OBJECTIVE

I am looking for opportunities in small businesses that could be more successful with efficient management. With the right resources and team members, I can bring struggling companies back from the brink. I believe in myself and my hard/smart working skills. As I had done a Diploma and now doing my graduation in the same stream i.e. Computer science and engineering, I spent a big portion of time enhancing my coding skills and also learned different programming languages.

EDUCATION

Undergraduate College (Continuing since 2018)
